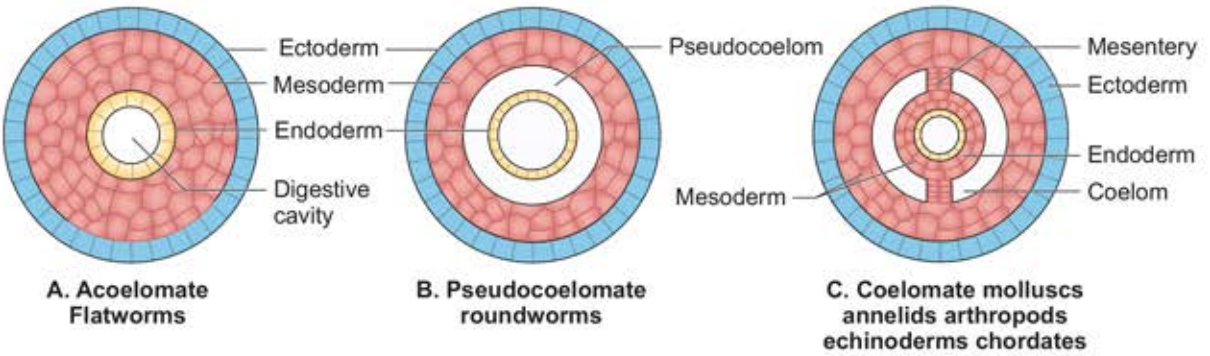

Figure 2.7 Diagrammatic representation of Coelom in Animals

or absence of notochord, animals are classified as chordates (Cephalochordats, Urochordates, Pisces to Mammalia) and nonchordates (Porifera to Hemichordata).

2.2 Classification of Kingdom Animalia

Animal kingdom is divided into two sub-kingdoms, the Parazoa and Eumetazoa based on their organisation.

1. **Parazoa**: These include the multicellular sponges and their cells are loosely aggregated and do not form tissues or organs.

2. **Eumetazoa**: These include multicellular animals with well defined tissues, which are organised as organs and organ systems. Eumetazoans includes two taxonomic levels called grades. They include **Radiata** and **Bilateria**.

Grade: 1 Radiata

Among the eumetazoa, a few animals have an organisation of two layers of cells, the outer ectoderm and inner endoderm, separated by a jelly like mesoglea. They are radially symmetrical and are diploblastic.
