24. List the features that all vertebrates show at some point in their development.
25. Compare closed and opened circulatory system
26. Compare Schizocoelom with enterocoelom
27. Identify the structure that the archenteron becomes in a developing animal.
28. Observe the animal below and answer the following questions

    a. Identify the animal
    b. What type of symmetry does this animal exhibit?
    c. Is this animal Cephalized?
    d. How many germ layers does this animal have?
    e. How many openings does this animal's digestive system have?
    f. Does this animal have neurons?
29. Choose the term that does not belong in the following group and explain why it does not belong?

    Notochord, cephalisation, dorsal nerve cord and radial symmetry
30. Why flatworms are called acoelomates?
31. What are flame cells?
32. Concept Mapping - Use the following terms to create a concept map that shows the major characteristic features of the phylum nematoda:

    Round worms, pseudocoelomates, digestive tract, cuticle, parasite, sexual dimorphism
33. In which phyla is the larva trochopore found?
34. Which of the chordate characteristics do tunicates retain as adults?
35. List the characteristic features that distinguish cartilaginous fishes with living jawless fishes
36. List three features that characterise bony fishes.
37. List the functions of air bladder in fishes.
38. Write the characteristics that contributes to the success of reptiles on land.
39. List the unique features of bird's endoskeleton.
40. Could the number of eggs or young ones produced by an oviparous and viviparous female be equal? Why?
