www.tntextbooks.in

j. Bloods is filtered through its walls into the Bowman's capsule.

k. Scientific term for urination.

l. Regulation of water and dissolved substances in blood and tissue fluid.

m. Carry urine from the kidneys to the bladder.

n. Consists of the kidneys, ureters and bladder.

o. Removal of useful substances from glomerular filtrate.

p. The process by which water is transported in the proximal convoluted tubule.

q. Where has the blood in the capillaries surrounding the proximal convoluted tubule come from?

r. What solute the blood contains that are not present in the glomerular filtrate?

28. With regards to toxicity and the need for dilution in water, how different are ureotelic and uricotelic excretions? Give examples of animals that use these types of excretion?

29. Differentiate protonephridia from metanephridia

30. What is the nitrogenous waste produced by amphibian larvae and by the adult animal?

31. How is urea formed in the human body?

32. Differentiate cortical from medullary nephrons

33. What vessels carry blood to the kidneys? Is this blood arterial or venous?

34. Which vessels drain filtered blood from the kidneys?

35. What is tubular secretion? Name the substances secreted through the renal tubules

36. How are the kidneys involved in controlling blood volume? How is the volume of blood in the body related to arterial pressure?

37. Name the three main hormones are involved in the regulation of the renal function?

38. What is the function of antidiuretic hormone? Where is it produced and what stimuli increases or decreases its secretion?

39. What is the effect of aldosterone on kidneys and where is it produced?

40. What evolutionary hypothesis could explain the heart's role in secreting a hormone that regulates renal function? What hormone is this?
