26-08-16	BY CASH			10,000.00	33,932.00 C

Specimen of E-Statement

Student activity

Think: Observe the above format. Why the withdrawals are shown as debit and deposits are shown as credit in a bank statement? [Remember: in the cash book it is the reverse]

When the entries in the bank statement are compared with the cash book, it will be found that the accounting treatment is reverse in the cash book. This is because the cash book is prepared from the point of view of business, whereas the bank statement is prepared from the bank's point of view.

Following the double entry system, the credit balance in the bank pass book represents the debit balance as per the cash book and vice-versa. This is because, bank is a debtor for the business and business unit (customer to the bank) is a creditor for the bank when there is a favourable balance in the bank. When money is deposited by the business into the bank, customers account is credited in the bank's book, as this is the amount owed by the bank to its customer. Similarly, when the money is withdrawn or taken out of the bank by the business, customer's account is debited as this decreases the amount owed by the bank to the customer. As a result of this, favourable balance, as per bank statement (bank pass book), will appear as a credit balance and overdrawn balance as a debit balance.
