## 10.1 Introduction

**Student activity**

**Think:** Mr. Nihal bought a car for ` 4, 00,000. After four years he wanted to sell it for more than ` 4, 00,000. Is it possible? Why do you think that it is possible/it is not possible?

Business enterprises use certain fixed assets for the conduct of business operations. Such assets are building, plant and machinery, motor vehicles, furniture, office equipment, etc. These assets have a long span of life. After some years, the assets will lose their usefulness for the business operations. Purchase of such fixed assets or construction of these is a capital expenditure. Hence the amount cannot be transferred to profit and loss account of the year of purchase. But every year, a part of the capital expenditure attributable to the use during the year is charged to profit and loss account and is reduced from the cost of the asset. The portion of cost of asset attributable to the use and expiry of time is to be measured and accounted which is called depreciation. Depreciation is treated as a charge against profit and is debited to profit and loss account.

## 10.2 Depreciation - Meaning and definition

The process of allocation of the relevant cost of a fixed asset over its useful life is known as depreciation. It is an allocation of cost against the benefit derived from a fixed asset during an accounting period.

According to **Spicer and Pegler**, "Depreciation is the measure of exhaustion of the effective life of an asset from any cause during a given period".

According to **R.N. Carter**, "Depreciation is the gradual and permanent decrease in the value of an asset from any cause".

### 10.2.1 Useful life of the asset

Useful life is (a) the period over which an asset is expected to be available for use by an enterprise; or (b) the number of production or similar units expected to be obtained from the asset by an enterprise.

According to Indian Accounting Standards, (AS 10) depreciation is the systematic allocation of the depreciable amount of an asset over its useful life. The depreciable amount of an asset is the cost of an asset or other amount substituted for cost, less its residual value.

### 10.2.2 Depreciable assets

Fixed assets which are meant for use in the business for more than one accounting period, the cost of which can be written off over their useful life are known as depreciable assets. Buildings, machinery, vehicles, furniture, computers and equipment are examples of depreciable fixed assets. These assets have limited useful life. They are meant for use in the business for production or supply of goods or for administrative purposes. These are not meant for resale.
