Calculation of Empirical and Molecular Formula

By using this tool you will be able to calculate the empirical and **molecular formula from the percentage composition of elements**

Please go to the URL
https://ggbm.at/FbUwkmUw
(or)
Scan the QR code on the right side

Step – 1

Open the Browser and type the URL given (or) Scan the QR Code. You can see a GeoGebra Work book named "11th Standard Chemistry". Open the worksheet named "Empirical Formula". You will see a webpage as shown in the figure.

Step – 2

Find the serial number of the elements of the compound under examination from the table present on the right side of the page and enter it in the space provided (1). And enter their percentage of composition in the corresponding space (2)

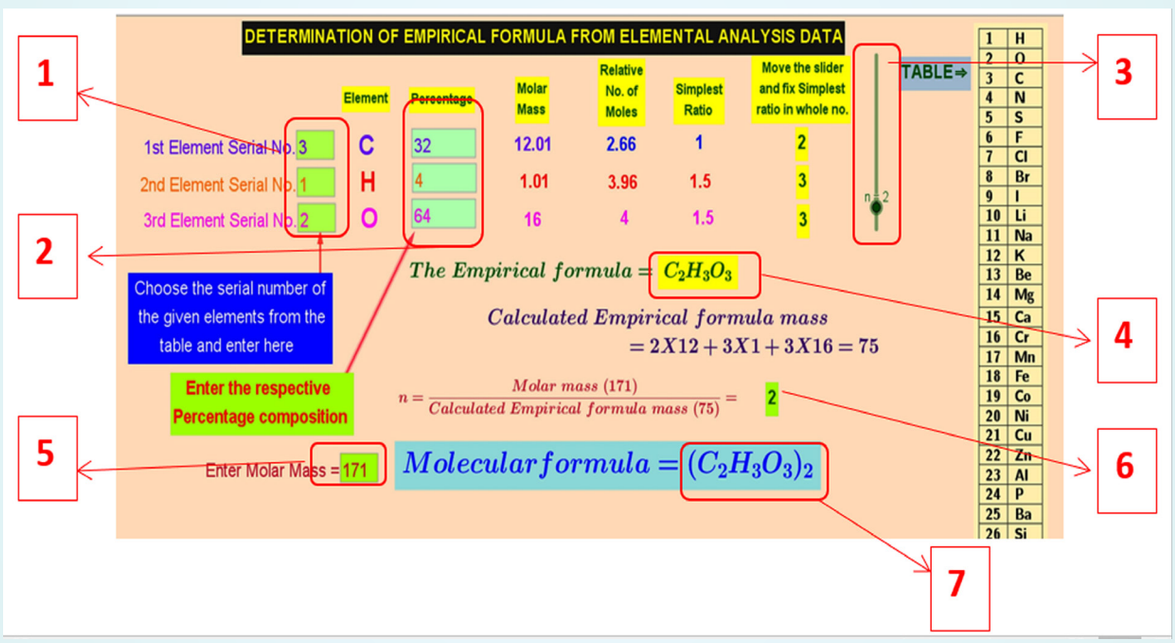

Step – 3

Now you can see the molar mass, relative no. of moles and the simplest ratio all automatically calculated and filled in the corresponding boxes. If the simplest ratio contains fractions then use the slider (3) to choose a smallest number to bring the simplest ratio to whole number.

You can now see the calculated empirical formula (4)

Step – 4

In order to calculate the Molecular formula, enter the molar mass in the corresponding box (5). Now the 'n' will be displayed (6) and Molecular formula is displayed at the bottom (7)
