Rule	Illustration
If both alicyclic ring and the side chain contain same functional group, the parent hydrocarbon is selected on the basis of number of carbon-atoms in the ring and side chain	 2-(2-hydroxypropyl)cyclohexan-1-ol
If more than one alicyclic rings are attached to the single chain of carbon atoms, the compound is named as a derivative of alkane and alicyclic rings are treated as substituent irrespective of the number of atom in the ring or chain	 1-(cyclobutyl)- 2- (cyclopropyl) - ethane
If the alicyclic ring is directly attached to the benzene ring the compound is named as a derivative of benzene	 **cyclopentylbenzene**
If the alicyclic ring has a functional group along with some substituent on the ring, then the appropriate prefixes and suffixes are used to represent such groups, and numbering is done in such a way that the functional group is not counted for word root rather appropriate suffixes are used to represent such groups	 **cyclohexanecarboxylic acid**  **2-carbamoylcyclobutane-1-carboxylic acid**

Evaluate Yourself

2) Write structural formula for the following compounds

(i) Cyclohexa-1, 4-diene (ii) Ethynyl cyclohexane

NOMENCLATURE OF AROMATIC COMPOUNDS:

An aromatic compound consists of two parts nucleus and side chain

(A) Nucleus: The benzene ring present in aromatic compound is called nucleus. It is represented as follows

11th Chemistry Chapter-11 Vol-2 EM.indd 122 09-01-2023 14:43:03
