www.tntextbooks.in

Optical Character Recognition (Optical Grapheme Recognition) engine for the Indus Scripts has been developed using Deep Learning Neural Networks (a sub-field of Artificial Intelligence).

Given photographs, scans, or any image feed of an Indus Valley Civilization artifact, the system will be able to recognize the inscriptions (the symbol/ grapheme sequences) from the image. There are totally 417 Symbols/Graphemes/ Characters in the Indus Scripts and just 3700+ text inscriptions of data for the machine to learn and attain expert-level status.

1.4. Data and Information

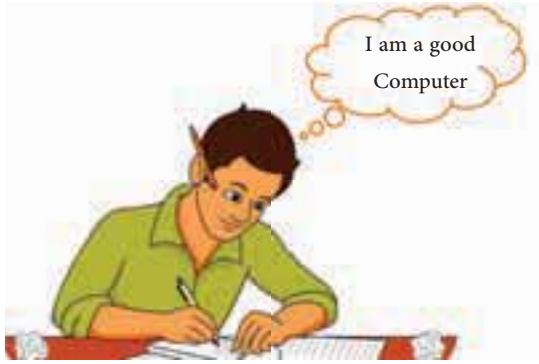

We all know what a computer is? It is an electronic device that processes the input according to the set of instructions provided to it and gives the desired output at a very fast rate. Computers are very versatile as they do a lot of different tasks such as storing data, weather forecasting, booking airlines, railway or movie tickets and even playing games.

Computer - man or machine?

Before 19th century, the term "Computer" was referred to humans who performed calculations using Abacus and Slide Rule and not to machine.

The term "computer" is derived from the word "compute" which means to calculate. The person who performs calculation is called as Computer. This term was later given to mechanical device as they began replacing the human computers.

Today's computers are electronic devices that accept data as input, process it, produce output and stores it for future reference.

Data: Data is defined as an un-processed collection of raw facts, suitable for communication, interpretation or processing.

For example, 134, 16 'Kavitha', 'C' are data. This will not give any meaningful message.

Information: Information is a collection of facts from which conclusions may be drawn. In simple words we can say
