Points to Remember

- Compound statements are composed of sequential, alternative and iterative control flow statements.
- The value of a condition is true or false, depending on the values of the variables.
- Alternative statement selects and executes exactly one of the two statements,depending on the value of the condition.
- Conditional statement is executed only if the condition is true. Otherwise, nothing is done.
- Iterative statement repeatedly evaluates a condition and executes a statement as long as the condition is true.
- Programming language, pseudo code, and flowchart are notations for expressing algorithms.
- Decomposition breaks down a problem into smaller subproblems and combine their solutions to solve the original problem.
- A function is an abstraction of a subproblem, and specified by its input property, and its input-outputrelation.
- Users of function need to know only what the function does, and not how it is done.
- In refinement, starting at a high level, each statement is repeatedly expanded into more detailed statements in the subsequent levels.

Evaluation

Part I

1. Suppose u, v = 10 ,5 before the assignment. What are the values of u and v after the sequence of assignments?

   1 u := v

   2 v := u

   (a) u, v = 5 ,5

   (b) u, v = 5 ,10

   (c) u, v = 10 ,5

   (d) u, v = 10 ,10
