### (7)Other Operators:

| | |
|---|---|
| The Comma operator | Comma ( , ) is an operator in C++ used to string together several expressions. The group of expression separated by comma is evaluated from left to right. |
| Sizeof | This is called as compile time operator. It returns the size of a variable in bytes. |
| Pointer | * Pointer to a variable<br>& Address of |
| Component selection | . Direct component selector<br>-> Indirect component selector |
| Class member operators | :: Scope access / resolution<br>.* Dereference<br>->* Dereference pointer to class member |

**Precedence of Operators:**

Operators are executed in the order of precedence. The operands and the operators are grouped in a specific logical way for evaluation. This logical grouping is called as an Association.

**The order of precedence:**

| | | |
|---|---|---|
| ( ) [ ] | Operators within parenthesis are performed first | Higher |
| ++, -- | Postfix increment / decrement | |
| ++, -- | Prefix increment / decrement | |
| *, /, % | Multiplication, Division, Modulus | |
| +, - | Addition, Subtraction | |
| <, <=, >, >= | Less than, Less than or equal to, Greater than, Greater than or equal to | |
| ==, != | Equal to, Not equal to | |
| && | Logical AND | |
| \|\| | Logical OR | |
| ?: | Conditional Operator | |
| = | Simple Assignment | |
| +=, -=, *=, /= | Shorthand operators | |
| , | Comma operator | Lower |
