```
#include <iostream>
using namespace std;
int main()
{
        const int num=100;
        cout << "\n Value of num is = " << num;
        num = num + 1; // Trying to increment the constant
        cout << "\n Value of num after increment " << num;
}
```

For the above code, an error message will be displayed as **"Cannot modify the const object"** in Turbo compiler and **"assignment of read only memory num"** in Dev C++.

Evaluate Yourself

1. What is modifiers? What is the use of modifiers?
2. What is wrong with the following C++ statement:
   long float x;
3. What is variable ? Why a varible called symblolic varible?
4. What do you mean by dynamic initialization of a variable? Give an exmple.
5. What is wrong with the following statement?
   const int x;

9.13.5 References:

A reference provides an alias for a previously defined variable. Declaration of a reference consists of base type and an & (ampersand) symbol; reference variable name is assigned the value of a previously declared variable.

Syntax:

<type> <& reference_variable> = <original_variable>
