3. Write a C++ to find the total and percentage of marks you secured from 10th Standard Public Exam. Display all the marks one-by-one along with total and percentage. Apply formatting functions.

Points to Remember:

- Every programming language has two fundamental elements, viz., data types and variables.
- In C++, the data types are classified as three main categories (1) Built-in data types (2) User-defined data types (3) Derived data types.
- The variables are the named space to hold values of certain data type.
- There are five fundamental data types in C++: char, int, float, double and void.
- C++ compiler allocates specific memory space for each and every data handled according to the compiler's standards.
- Variables are user-defined names assigned to a memory location in which the values are stored.
- Declaration is a process to instruct the compiler to allocate memory as per the type specified along with the variable name.
- Manipulators are used to format output of any C++ program. Manipulators are functions specifically designed to use with the insertion (<<) and extraction(>>) operators.
- An expression is a combination of operators, constants and variables arranged as per the rules of C++.
- The process of converting one fundamental type into another is called as "Type Conversion". C++ provides two types of conversions (1) Implicit type conversion and (2) Explicit type conversion.

Evaluation

Part – I

Choose the correct answer.

1. How many categories of data types available in C++?

   (a) 5 (b) 4 (c) 3 (d) 2

2. Which of the following data types is not a fundamental type?

   (a) signed (b) int (c) float (d) char

3. What will be the result of following statement?
