www.tntextbooks.in

4. What is a reference variable? What is its use?

5. Consider the following C++ statement. Are they equivalent?

   char ch = 67;

   char ch = 'C';

6. What is the difference between 56L and 56?

7. Determine which of the following are valid constant? And specify their type.

   (i) 0.5 (ii) 'Name' (iii) '\t' (iv) 27,822

8. Suppose x and y are two double type variable that you want add as integer and assign to an integer variable. Construct a C++ statement for the doing so.

9. What will be the result of following if num=6 initially.

   (a) cout << num;

   (b) cout << (num==5);

10. Which of the following two statements are valid? Why? Also write their result.

    int a;

    (i) a = 3,014; (ii) a=(3,014);

Part – III

Answers to all the questions (3 Marks):

1. What are arithmetic operators in C++? Differentiate unary and binary arithmetic operators. Give example for each of them.

2. Evaluate x+= x + ++x; Let x=5;

3. How relational operators and logical operators related to one another?
