Illustration 10.6 C++ program to find your grade using if-else ladder.

```
#include <iostream>
using namespace std;
int main ()
{
int marks;
cout<<" Enter the Marks  :";
cin>>marks;
if( marks >= 60 )
        cout<< "Your grade is 1st class !!" <<endl;
                else if( marks >= 50 && marks < 60)
                        cout<< "your grade is 2nd class !!" <<endl;
                                else if( marks >= 40 && marks < 50)
                                        cout<< "your grade is 3rd class !!" <<endl;
else
        cout<< "You are fail !!" <<endl;
return 0;
}
```

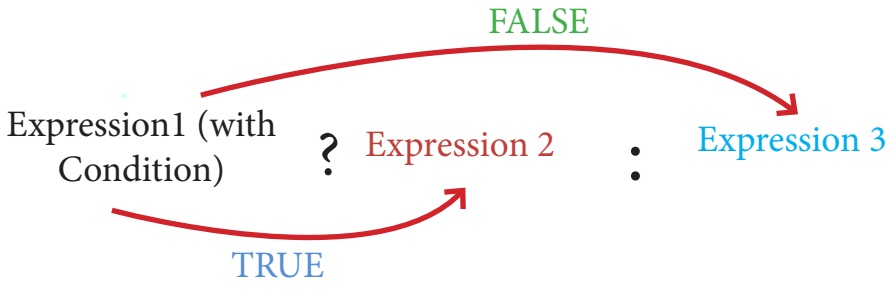
Output

```
Enter the Marks  :60
Your grade is 1st class !!
```

When the marks are greater than or equal to 60, the message **"Your grade is 1st class !!"** is displayed and the rest of the ladder is bypassed. When the marks are between 50 and 59, the message **"Your grade is 2nd class !!"** is displayed, and the other ladder is bypassed. When the mark between 40 to 49, the message **"Your grade is 3nd class !!"** is displayed, otherwise, the message "You are fail !!" is displayed.

10.4.5 The ?: Alternative to if- else

The conditional operator (or Ternary operator) is an alternative for 'if else statement'. The conditional operator that consists of two symbols (?:). It takes three arguments. The control flow of conditional operator is shown below

The syntax of the conditional operator is:


```
expression 1? expression 2 : expression 3
```
