www.tntextbooks.in

4. Program to print whether a given character is an uppercase or a lowercase character or a digit or any other character. use ASCII codes for it. The ASCII codes are as given below:

Characters	**ASCII Range**
'0' - '9'	48 - 57
'A' - 'Z'	65 - 90
'a' - 'z'	97 - 122
other characters	0- 255 excluding the above mentioned codes.

5. Program to calculate the factorial of an integer.
6. Program that print 1 2 4 8 16 32 64 128.
7. Program to generate divisors of an interger.
8. Program to print fibonacci series i.e., 0 1 1 2 3 5 8.....
9. Programs to produces the following design using nested loops

(a)	(b)	(c)
A A B A B C A B C D A B C D E A B C D E F	5 4 3 2 1 5 4 3 2 5 4 3 5 4 5	# # # # # # # # # # # # # # # #

10. Program to check whether square root of a number is prime or not.

Points to Remember:

- A computer program is a set of statements or instructions to perform a specific task.
- There are two kinds of statements used in C++, viz Null and Compound Statement.
- Control Statement are statements that alter the sequence of flow of instaructions.
- There are three kinds of control statement used in C++. (1) Sequence Statement (2) Selection Statement (3) Iteration Statement
- *If* and *Switch* are Selection Statements.
- The Conditional Operator is an alternative for 'if else Statement'.
- The Switch Statment is a multi-way branch statement.
- Iteration Statement (looping) is use to execute a set of statements repeatedly until a condition is satisfied.
- There are three kinds Iteration Statements supported. (1) *for* (2) *While* (3) *do-While*.
- In C++ three Jump Statment are used (1) *goto* (2) *break* (3) *continue*
