11.4.2 Character functions (ctype.h)

This header file defines various operations on characters. Following are the various character functions available in C++. The header file **ctype.h** is to be included to use these functions in a program.

11.4.2.1.isalnum()

This function is used to check whether a character is **alphanumeric or not**. This function returns non-zero value if c is a digit or a letter, else it returns 0.

Syntax:

int isalnum (char c)

Example :

int r = isalnum('5');

cout << isalnum('A') <<'\t'<<r;

But the statements given below assign 0 to the variable n, since the given character is neither an alphabet nor a digit.

char c = '$';

int n = isalnum(c);

cout<<c;

Output:

0

Program 11.3

```
#include<iostream>
#include<stdio.h>
#include<ctype.h>
using namespace std;
int main()
{
        char ch;
        int r;
        cout<<"\n Type a Character :";
        ch = getchar();
        r = isalnum(ch);
        cout<<"\nThe Return Value of isalnum(ch) is :"<<r;
}
```
