www.tntextbooks.in

Output-1:

Type a Character :A

The Return Value of isalnum(ch) is :1

Output-2:

Type a Character :?

The Return Value of isalnum(ch) is :0

11.4.2.2. isalpha()

The isalpha() function is used to check whether the given character is an alphabet or not.

Syntax:

int isalpha(char c);

This function will return 1 if the given character is an alphabet, and 0 otherwise 0. The following statement assigns 0 to the variable n, since the given character is not an alphabet.

int n = isalpha('3');

But, the statement given below displays 1, since the given character is an alphabet.

cout << isalpha('a');

Program 11.4

```
#include<iostream>
#include<stdio.h>
#include<ctype.h>
using namespace std;
int main()
{
        char ch;
        cout << "\n Enter a charater: ";
        ch = getchar();
        cout<<"\n The Return Value of isalpha(ch) is :" << isalpha(ch) ;
}
```
