11.4.2.4. islower()

This function is used to check whether a character is in lower case (small letter) or not. This functions will return a non-zero value, if the given character is a lower case alphabet, and 0 otherwise.

Syntax:

int islower(char c);

After executing the following statements, the value of the variable **n** will be **1** since the given character is in lower case.

```
char ch = 'n';

int n = islower(ch);
```

But the statement given below will assign 0 to the variable n, since the given character is an uppercase alphabet.

```
int n = islower('P');
```

11.4.2.5. isupper()

This function is used to check the given character is uppercase. This function will return 1 if true otherwise 0. For the following examples value **1** will be assigned to **n** and **0** for m.

```
int n=isupper('A');

int m=isupper('a');
```

11.4.2.6. toupper()

This function is used to convert the given character into its uppercase. This function will return the upper case equivalent of the given character. If the given character itself is in upper case, the output will be the same.

Syntax:

char toupper(char c);

The following statement will assign the character constant **'K'** to the variable c.

```
char c = toupper('k');
```

But, the output of the statement given below will be **'B'** itself.

```
cout <<toupper('B');
```
