www.tntextbooks.in

**Output:**

String in Source Before Copied :Computer Science
String in Target Before Copied :target
String in Target After strcpy function Executed :Computer Science

### 11.4.3.2 strlen()

The **strlen()** takes a null terminated byte string source as its argument and returns its length. The length does not include the null(\0) character.

**Program 11.7**

```
#include <string.h>
#include <iostream>
using namespace std;
int main()
{
        char source[ ] = "Computer Science";
        cout<<"\nGiven String is "<<source<<" its Length is "<<strlen(source);
        return 0;
}
```

**Output:**

Given String is Computer Science its Length is 16

### 11.4.3.3 strcmp()

The **strcmp()** function takes two arguments: string1 and string2. It compares the contents of string1 and string2 lexicographically.

**The strcmp() function returns a:**

- Positive value if the first differing character in string1 is greater than the corresponding character in string2. (ASCII values are compared)
- Negative value if the first differing character in string1 is less than the corresponding character in string2.
- 0 if string1 and string2 are equal.
