Program 11.21

```
#include<iostream>
using namespace std;
int display()
{
        int a, b, s;
        cout<<"Enter 2 numbers: ";
        cin>>a>>b;
        s=a+b;
        return s;
        }
int main()
{
         int m=display();
        cout<<"\nThe Sum="<<m;
        return(0);
}
```

Output :

```
Enter 2 numbers: 10 30
The Sum=40
```

11.7.3 A Function without return value and with parameter

The name of the function is **display()**, its return type is void and it has two parameters or arguments **x** and **y** to receive two values. The **return** statement returns the control back to the calling statement.

Program 11 .22

```
#include<iostream>
using namespace std;
void display(int x, int y)
{
        int s=x+y;
        cout<<"The Sum of Passed Values: "<<s;
}
```
