The ages of four persons are:

18

17

21

23

Traversal:

Accessing each element of an array at least once to perform any operation is known as "Traversal". Displaying all the elements in an array is an example of "traversal".

```
// Traversal of an array
#include <iostream>
using namespace std;
int main()
{
        int num[5];
        for (int i=0; i<5; i++)
        {
                cout<< "\n Enter value " << i+1 <<"= ";
                cin>>num[i];  // Reading from keyboard
// Traversing the array elements sequentially and adding 1 to each element
                num[i] = num[i] + 1;
        }
        cout<< "\n After incrementing, the values in array num..." <<endl;
        for (int j=0; j<5; j++)
        {
// Traversing the array elements sequentially and printing each one of them
        cout<<num[j] <<endl;
        }
}
```

Output:

```
 Enter value 1= 10
 Enter value 2= 20
 Enter value 3= 30
 Enter value 4= 40
 Enter value 5= 50
After incrementing, the values in array num...
11
21
31
41
51
```
