12.5 Passing Arrays to functions

In C++, arrays can be passed to a function as an argument. To pass an array to a function in C++, the function needs the array name as an argument.

Passing a two-dimensional array to a function

Write a program to display marks of 5 students by passing one-dimensional array to a function.

C++ program to display marks of 5 students (one dimensional array)

```
#include <iostream>
using namespace std;
void display (int m[5]);
int main()
{
        int marks[5]={88, 76, 90, 61, 69};
        display(marks);
        return 0;
}
 void display (int m[5])
{
        cout << "\n Display Marks: " << endl;
                for (int i=0; i<5; i++)
                {
                        cout << "Student " << i+1 << ": " << m[i]<<endl;
                }
}
```

Output:

```
Display Marks:
Student 1: 88
Student 2: 76
Student 3: 90
Student 4: 61
Student 5: 69
```
