12.7.5 Structure Assignments

Structures can be assigned directly instead of assigning the values of elements individually.

Example

If Mahesh and Praveen are same age and same height and weight then the values of Mahesh can be copied to Praveen

```
struct Student
{
        int  age;
        float height, weight;
}mahesh;
```

Structure assignment is possible only if both structure variables/ objects are same type.

The age of Mahesh is 17 and the height and weights are 164.5 and 52.5 respectively.The following statement will perform the assignment.

```
mahesh = {17, 164.5, 52.5};
praveen =mahesh;
```

will assign the same age, height and weight to Praveen.

Examples:

The following C++ program reads student information through keyboard and displays the same

```
#include <iostream>
using namespace std;
struct Student
{
        int  age;
        float height, weight;
```
