```
} mahesh;
void main( )
{
        cout<< " Enter the age:"<<endl;
        cin>>mahesh.age;
        cout<< "Enter the height:"<<endl;
        cin>>mahesh.height;
        cout<< "Enter the weight:"<<endl;
        cin>>mahesh.weight;
        cout<< "The values entered  for Age, height and weight are"<<endl;
        cout<<mahesh.age<<     "\t"<<mahesh.height<<     "\t"<<Mahesh.
weight;
}
```

Output:

```
Enter the age:
18
Enter the height:
160.5
Enter the weight:
46.5
The values entered  for Age, height and weight are
18      160.5           46.5
```

The following C++ Program assigns data to members of a structure variable and displays the contents

```
include<iostream>
using namespace std;
struct Employee
{
char name[50];
int age;
        float salary;
};
```
