www.tntextbooks.in

```
int main()
{
        Employee e1;
        cout<< "Enter Full name: ";
        cin>>e1.name;
        cout<<endl<<"Enter age: ";
        cin>>e1.age;
        cout<<endl<< "Enter salary: ";
        cin>>e1.salary;
        cout<< "\nDisplaying Information." <<endl;
        cout<< "Name: " <<e1.name <<endl;
        cout<<"Age: " <<e1.age <<endl;
        cout<< "Salary: " <<e1.salary;
return 0;
}
```

Output:

```
Enter Full name:
Ezhil
Enter age:
 27
Enter salary:
40000.00
Displaying Information.
Name: Ezhil
Age: 27
Salary: 40000.00
```

12.7.6 Nested Structures

The structure declared within another structure is called a nested structure. A structure 'Student'was used to hold the student's information in the earlier examples. Date of birth can be included in the student's information. There are three components in the date of birth namely, date, month and year like 25-NOV-2017. Hence, another structure is used to keep the date of birth of a student. The following code creates a structure for the date of birth.
