For example consider the following illustration

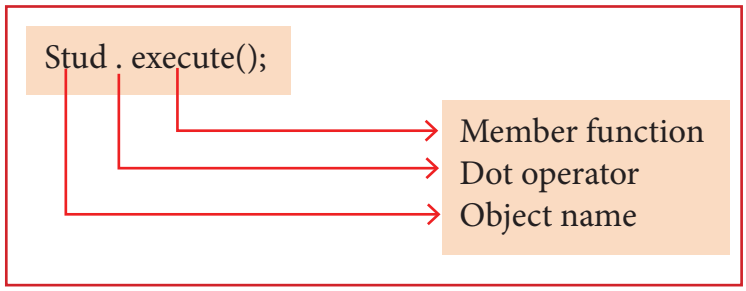

Illustration 14.4 C++ program to illustrate the communication of object:

Calling a member function of an object is also known as sending message to object or communication with the object.

```
#include<iostream>
using namespace std;
class compute
{
        int n1,n2; //private by default
public :
        int n;
        int add (int a, int b)     //inline member function
        {
                int c=a+b;       //int c ; local variable for this function
                return c;
        }

        int prd (int a, int b)        //inline member function
        {
                int c=a*b;
                return c;
        }
};      // end of class specification
compute c1,c2;            //global object

int main()
{
        c1.n =c1.add(12,15);   //member function is called
        c2.n =c2.add(8,4);
        cout<<"\n Sum of object-1  "<<c1.n;
        cout<<"\n Sum of object-2  "<<c2.n;
        cout<<"\n Sum of the two objects are  "<<c1.n+c2.n;
        c1.n=c1.prd(5,4);
        c2.n=c2.prd(2,5);
        cout<<"\n Product of object-1  "<<c1.n;
        cout<<"\n Product of object-2  "<<c2.n;
        cout<<"\n Product of the two objects are  "<<c1.n*c2.n;
        return 0;
}
```
