Hands on practice:

1 Define a class Employee with the following specification

private members of class Employee

empno- integer

ename – 20 characters

basic – float

netpay, hra, da, - float

calculate () – A function to find the basic+hra+da with float return type

public member functions of class employee

havedata() – A function to accept values for empno, ename, basic, hra, da and call calculate() to compute netpay

dispdata() – A function to display all the data members on the screen

2. Define a class MATH with the following specifications

private members

num1, num2, result – float

init() function to initialize num1, num2 and result to zero

protected members

add() function to add num1 and num2 and store the sum in result

diff() function to subtract num1 from num2 and store the difference in the result

public members
