```
float add(float c, float g)
{
 float sum;
 sum = c + g;
 return sum;
}
long add(long c, long g,long h)
{
 long sum;
 sum = c + g+h;
 return sum;
}
```

Output

```
Enter three integers
3 4 5
Sum of 3 integers: 12
Enter two integers
4 6
Sum of 2 integers: 10
Enter two floating point numbers
2.1 3.1
Sum of floats: 5.2
```

Illustration 15.3 Default argument and return type are not considered in overloading

```
#include <iostream>

using namespace std;

long add(long, long);

long add(long long g=0);

int add(long,long);   //  [Error] ambiguating new declaration of 'int add(long int, long int)
```
