3. void dispchar(char ch='$',int size=10)

```
{
    for(int i=1;i<=size;i++)
    cout<<ch;
}
```

How will you invoke the function dispchar() for the following input?

To print $ for 10 times

(A) dispchar(); (B) dispchar(ch,size);

(C) dispchar($,10); (D)dispchar('$',10 times);

4. Which of the following is not true with respect to function overloading?

(A) The overloaded functions must differ in their signature.

(B) The return type is also considered for overloading a function.

(C) The default arguments of overloaded functions are notconsidered for Overloading.

(D) Destructor function cannot be overloaded.

5. Which of the following is invalid prototype for function overloading

(A) void fun (intx);
    void fun (char ch) ;

(B) void fun (intx);
    void fun (inty);

(C) void fun (double d);
    void fun (char ch);

(D) void fun (double d);
    void fun (inty);

6. Which of the following function(s) combination cannot be considered as overloaded function(s) in the given snippet ?

```
void print(char A,int B); // F1
void printprint(int A, float B); // F2
void Print(int P=10); // F 3
void print(); // F4
```

(A) F1,F2,F3,F4 (B) F1,F2,F3 (C) F1,F2,F4 (D) F1,F3,F4
