```
class result : public exam
{
        int total;
        public:
                void showresult()
                {
                        total=mark1+mark2+mark3+mark4+mark5+mark6;
                        cout<<"\nTOTAL MARK SCORED    :  "<<total;
        }
};
int main()
{
        result r1;
r1.acceptname();      //calling base class function using derived class object
r1.acceptmark();      //calling base class function which itself is a derived
                      // class  function using its derived class object
r1.displayname();     //calling base class function using derived class
                      //object
r1.displaymark();     //calling base class function which itself is a derived
                      //class  function using its derived class object
r1.showresult();      //calling the child class function
return 0;
}
```

Output:

```
Enter roll no and name .. 1201 SARATHI
 Enter lang,eng,phy,che,csc,mat marks.. 96 98 100 100 100 100
