```
{
cout << "\nConstructor of derived ...";
}
~derived()
{
cout << "\nDestructor of derived ...";
}
};
class derived1 :public derived
{
public :
derived1()
{
cout << "\nConstructor of derived1 ...";
}
~derived1()
{
cout << "\nDestructor of derived1 ...";
}
};
int main()
{
derived1 x;
return 0;
}
```

Output:

```
Constructor of base class...
Constructor of derived ...
Constructor of derived1 ...
Destructor of derived1 ...
Destructor of derived ...
Destructor of base class....
```
