```
int main()
  {
        T t1,t2;
        t1.foo();
        t2.foo();
        }
```

Ouput

```
5  5
5  5

Press any key to continue . . .
```

Another Example Program 16.8.1A using this pointer

```
#include <iostream>
using namespace std;

class Container {
  public:
    // Constructor definition
      Container(double l = 2.0, double b = 2.0, double h = 2.0) {
      cout<<"Constructor called." << endl;
      length = l;
      breadth = b;
      height = h;
    }
    double Volume() {
    return length * breadth * height;
    }
    int compare(Container container)
    {
    return this->Volume() >Container.Volume();
    }
```
