CASE STUDY 2

Write a class for a class Stock

1. – Each Stock has a data member which holds the net price, and a constructor which sets this price.

   – Each Stock has a method get_Price(), which calculates and returns the gross price (the gross price includes VAT at 21%)

2. Write 2 classes which inherit from the general Stock class, of type Notebook and Book

   – The gross price for Notebook includestax at 21%,

   – Books are free of tax, so the gross price is unchanged from the net price, and you will need to re-define the getGrossPrice method in this class

3. Write a program which does the following:

   a. Declare an array of 10 objects to Stock

   b. Declare aobject to a Book and an object to Notebook

   c. Ask the user to enter details of the book, and of the Notebook item,.

   d. Check your method getGrossPrice works correctly with each type and then displaythe result
