இந்த உதாரணத்தை கவனியுங்கள்:

```
#include <iostream>
using namespace std;
struct Employee
{
char name[50];
int age;
float salary;
};
void printData(Employee);   // Function declaration
int main()
{
        Employee p;
        cout<< "Enter Full name: ";
        cin>>p.name;
        cout<< "Enter age: ";
        cin>>p.age;
        cout<< "Enter salary: ";
        cin>>p.salary;
        // Function call with structure variable as an argument
printData(p);
return 0;
}
void printData(Employee p)
{
        cout<< "\nDisplaying Information." <<endl;
        cout<< "Name: " << p.name <<endl;
        cout<<"Age: " <<p.age<<endl;
        cout<< "Salary: " <<p.salary;
}
```

வெளியீடு:

```
Enter Full name: Kumar
Enter age: 55
Enter salary: 34233.4
Displaying Information.
Name: Kumar
Age: 55
Salary: 34233.4
```
