Table A1.1 Systematic developments in physics over centuries (*Cont*)

■ Sun is centre of the solar system (Hypothesis. Could not be proven by experimental evidence) ■ Idea of Earth rotation around its own axis.	Around 2nd century BC (Aristarchus of Samos) Around 2nd century BC (Seleucia)
■ Foundation of hydrostatics ■ Idea of lever ■ Mechanical work using pulleys ■ Law of Buoyancy known as a Archimedes principle ■ First accurate value of the number 'pi'	Around 3rd century BC (Archimedes)
■ Focused on motion of planets and stars ■ Prediction of solar eclipses ■ Calculation of distance of Earth to Moon, Earth to Sun ■ Astronomical observation were recorded	End of 2nd century BC (Hippachrus)
■ Geo centric model (Not hypothesis. Explained a lot of naked eye observation) ■ Explanation of Planets 'retrograde motion' ■ "Almagest"- First book on astronomy	Around 100 AD(CE) (Ptolemy)
■ Idea of Earth's rotation about its own axis ■ Idea of zero ■ Contribution to mathematics	5th Century AD (Aryabhatta-India)
■ Understanding of early optics ■ Boon on 'Treasury of astronomy'- Accurate astronomical table than Ptolemy's data	9th century AD (Ibn al-Hayatham- Arabia) 12th Century AD (Nasir al-Din- Persian astronomer)
■ From 7th century to 14th century major development in science happened in muslim countries (Arabia, Persia, Iran etc.)
