Balls and Runs

What a Celebration! What a Relation!! What a Function!!!

BATTING BLASTERCLASS

Rohit's Joint Fastest T20 Ton Off 35 Balls Sinks Lanka

Ruchir.Mishra @timesgroup.com

Indore: A belter of a wicket, short boundaries and an average bowling attack. An in-form Indian team couldn't have asked for a perfect T20 recipe than this.

Rohit Sharma (118, 43b, 12x4, 10x6) and Lokesh Rahul (89, 49, 5x4, 6x6) feasted on the Sri Lankan bowlers with some breath-taking stroke-play. Rohit blasted a record equalling hundred, while Rahul missed out on his second T20 ton. The duo had a record Indian opening stand—fourth overall—as India posted 260-5, the joint second highest total.

India then wrapped up the series without much discomfort with an 88-run victory after restricting Sri Lanka to 172-9 in 17.2 overs. The injured Angelo Mathews didn't come out to bat.

Sri Lanka kept the contest alive with an improved batting performance. Kusal Perera and Upul Tharanga took India's wrist spinners Yuzvendra Chahal and Kuldeep Yadav to the cleaners during their 109-run second wicket stand, which came off just 53 balls. Unlike Cuttack, where they managed to overcome the dew problem, Chahal and Yadav struggled but still managed to get wickets in the middle overs.

91.52 Percent of runs scored scored in boundaries by Rohit. 106 runs of his 118 were scored by hitting fours or sixes. He is the third player to score 100 or more through boundaries after Aaron Finch and Glenn Maxwell.

By scoring a hundred in the second T20 International against Sri Lanka in Indore on Friday, Rohit Sharma became the first cricketer to score a hundred in every format in a series

ROHIT SHARMA

RUNS	BALLS	4s	6s	DOTS	SINGLES
118	43	12	10	8	10

10 Sixes hit by Rohit is the most by an Indian batsman in a T20 innings. He beat the record of Yuvraj Singh, who had hit seven sixes against England in Durban in 2007.

It was just a kind of momentum

1. Interpret the above data as,
   (i) a relation
   (ii) a function
   (iii) an onto function
   (iv) can you make the data as an one-to-one function? If not, why?
2. Identify the curves in Figure 1.69 and the corresponding equations for the base curve $y = x^2$ (graph with dotted line) by seeing the scale.
