Effect of temperature and pressure in an equilibrium process

By using this tool, we can determine the effect of pressure and temperature in the equilibrium concentration of the components in ammonia synthesis (Haber process)

Please go to the URL http://www.freezeray.com/flashFiles/ammoniaConditions.htm (or) Scan the QR code on the right side

B164_11_CHE_EM

Steps

- Open the Browser and type the URL given (or) Scan the QR Code.
- The website will show the equilibrium reaction involved in ammonia synthesis and the relative concentration of the components. The visual representation and the actual concentration values are given in the box 1.
- Now change the pressure or temperature using the corresponding slider indicated in the box2.
- As you move the slider you will be able to see the change in the equilibrium concentration of reactants and products.
- Now you can understand that if a stress is applied on the system at equilibrium, the system will adjust itself to nullify the effect of the stress.
