ions to bases. So hydrogen attached to triply bonded carbon atoms is acidic.

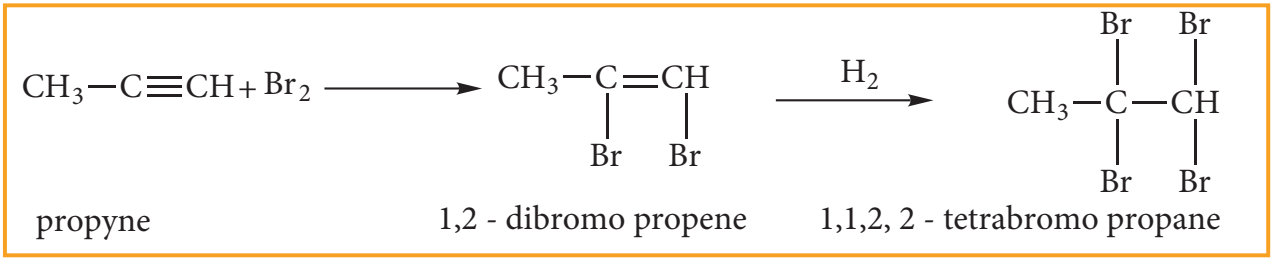

2. Addition reactions of alkynes

i) addition of hydrogen

ii) Addition Of Halogens:

When Br_2 in CCl_4 (Reddishbrown) is added to an alkyne, the bromine solution is decolourised. This is the test for unsaturation.

iii) Addition Of Hydrogen Halides:

Reaction of hydrogen halides to symmetrical alkynes is electrophilic addition reaction. This reaction also follows Markovnikoff's rule.
