benzenesulfonic acid

(d) Friedel Craft's Alkylation: (Methylation)

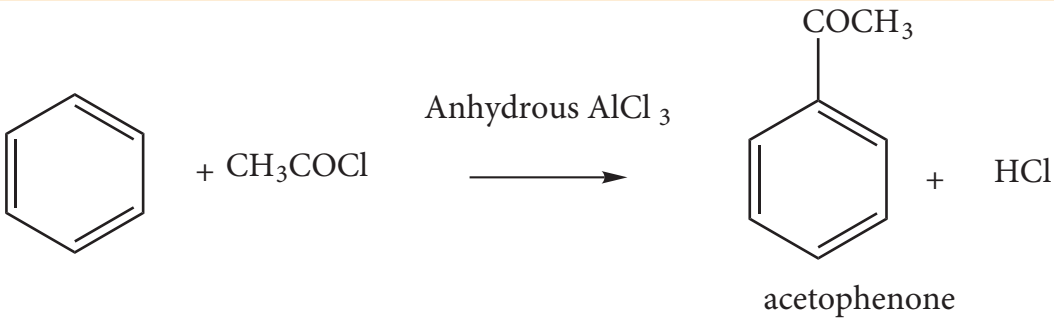

When benzene is treated with analkyl halide in the presence of only AlCl3, alkyl benzene is formed.

toluene

(e) Friedel Craft's Acylation : Acetylation

When benzene is treated withacetylchloride in the presence of AlCl3, acyl benzene is formed.

acetophenone

(f) Electrophilic Subitution Reactions: Mechanism

Benzene undergoes electrophilic substitution reaction because it is an electron-rich system due to delocalised π electron. So it a easily attacked by electrophilies and gives substituted products.
