11.1 Introduction

Student activity

Think: How often the business entities buy stationery items? How often they buy machinery? Is it fair if the business entity treats both these type of expenditure the same?

The main objective of accounting of business transactions is to ascertain the results of operations and the financial position of the business concern. The transactions carried on may yield benefit only for the current accounting period or they may yield benefit for more than one accounting period. According to matching principle, the expenses incurred in the current accounting period must be matched with the revenues earned during that period.

In case of certain expences, the benefit accrues only in the relevant accounting period. They are called revenue expenditrues. For example, salaries, rent, etc. But in case of certain expenditrues benefit extends beyond one accounting period. They are called capital expenditrues.

To exhibit a true and fair view of profitability and state of affairs, proper allocation of capital and revenue items is required. The revenue items are to be shown in the trading and profit and loss account and capital items are to be shown in the balance sheet.

11.2 Considerations in determining capital and revenue expenditures

The basic considerations to differentiate between capital and revenue expenditures are:

(i) Nature of business

Expenditure on purchase of goods is revenue expenditure. Expenditure on purchase of asset is capital expenditure. Whether an item of expenditure is goods or asset depends on the nature of business. Goods include articles or commodities in which the business is dealing with. For example, for a trader dealing in furniture, purchase of furniture is revenue expenditure but for any other trade, the purchase of furniture should be treated as capital expenditure and shown in the balance sheet as asset. Therefore, the nature of business is very important criteria in classifying expenditure between capital and revenue.

(ii) Effect on revenue generating capacity of business

If expenditure helps to generate income or revenue in the current accounting period, it is revenue expenditure. On the other hand, if expenditure helps to generate revenue for more than one accounting period, it is capital expenditure.

(iii) Purpose of expenditure

If expenditure is incurred in the normal course of maintenance of an asset, it is revenue expenditure. On the other hand, if expenditure is incurred for major repair of an asset which increases its productive capacity, it is capital expenditure.

(iv) Materiality of the amount involved

Relative proportion of the amount involved is considered in distinguishing between revenue expenditure and capital expenditure. If the amount of expenditure is material, it is treated as capital expenditure even if the expenditure does not increase the productive capacity of the asset. On the other hand, when the amount of expenditure is immaterial, it
