6. The temperature at which real gases obey the ideal gas laws over a wide range of pressure is called

a) Critical temperature b) Boyle temperature

c) Inversion temperature d) Reduced temperature

7. In a closed room of 1000 m^3 a perfume bottle is opened up. The room develops a smell. This is due to which property of gases?

a) Viscosity b) Density

c) Diffusion d) None

8. A bottle of ammonia and a bottle of HCl connected through a long tube are opened simultaneously at both ends. The white ammonium chloride ring first formed will be

a) At the center of the tube

b) Near the hydrogen chloride bottle

c) Near the ammonia bottle

d) Throughout the length of the tube

9. The value of universal gas constant depends upon

a) Temperature of the gas b) Volume of the gas

c) Number of moles of the gas d) units of Pressure and volume.

10. The value of the gas constant R is

a) 0.082 $dm^3 atm.$ b) 0.987 cal mol^{-1} K^{-1}

c) 8.3 J $mol^{-1}K^{-1}$ d) 8 erg $mol^{-1}K^{-1}$

11. Use of hot air balloon in sports and meteorological observation is an application of

a) Boyle's law b) Newton's law c) Kelvin's law d) Brown's law

12. The table indicates the value of van der Waals constant 'a' in $(dm^3)^2 atm.\ mol^{-2}$

Gas	O_2	N_2	NH_3	CH_4
a	1.360	1.390	4.170	2.253

The gas which can be most easily liquefied is

a) O_2 b) N_2 c) NH_3 d) CH_4
