The following are guide lines for writing IUPAC of the organic compound.

1. The IUPAC names are always written as single word, with notable exception of organic salts, acids and acid derivatives.

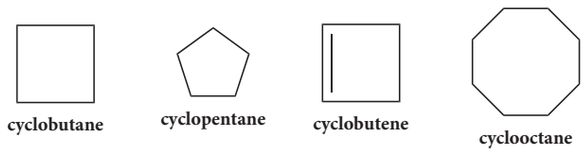

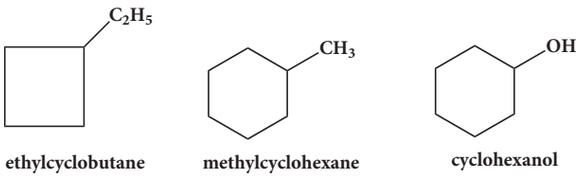

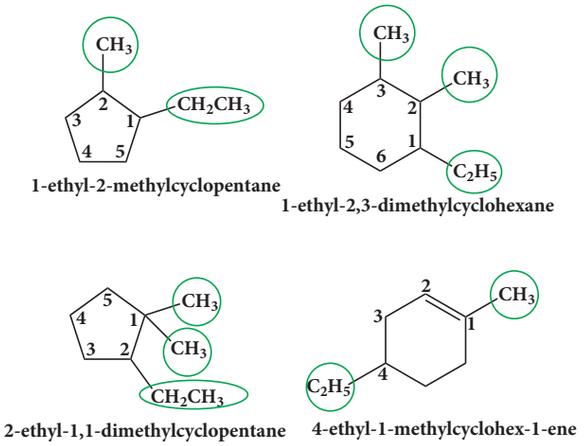

2. Commas are used between two adjacent number or letter symbols, and hypens are used to separate numbers and letter symbol in names **Eg: 2,2-Dimethyl-3-hexene N,N-Dimethyl methanamide**

3. Structural prefix such as, meso-, cis-, trans-, are italicised and joined to the name by a hypen. These prefixes are omitted in alphabetising compound names or in capitalising names at the beginning of a sentence.**Eg:*trans*-2-Butene**

4 .Structural prefixes such as di, tri, tetra are treated as a part of the basic name and therefore are neither italicised nor separated by a hypen. These prefixes are not taken into account in alphabetising compound names **eg: 4- Ethyl -2,2-dimethyl hexane.**

5 To name alicyclic compounds , the additional rules should be followed as illustrated in the table 11.6

Table 11.6 Rules for naming of alicyclic compounds:

Rule	Illustration
In the naming of such compounds a prefix cyclo is added to the word root	
If only one substituent is present on the ring, then it is not required to give its position	
If two or more substituents are present on the ring, the numbering of ring is done according to lowest set of locant rule. Alicyclic compounds also follow the numbering rules of acyclic compounds
