Strength of sulphuric acid used (N) = 0.1 N

Volume of sulphuric acid used (V) = 30 mL

30 ml of 0.1 N sulphuric acid = 30 ml of 0.1 N ammonia

$$\text{Percentage of nitrogen} = \left(\frac{14 \times NV}{1000 \times w}\right) \times 100$$
$$= \left(\frac{14 \times 0.1 \times 30}{1000 \times 0.3}\right) \times 100$$
$$= 14\,\%$$
