8. Which of the following constructor is executed for the following prototype ?

add display(add &); // add is a class name

(A) Default constructor

(B) Parameterized constructor

(C) Copy constructor

(D) Non Parameterized constructor

SECTION-B

Very Short Answers

1. What are called members?
2. Differentiate structure and class though both are user defined data type.
3. What is the difference between the class and object in terms of oop?
4. Why it is considered as a good practice to define a constructor though compiler can automatically generate a constructor ?
5. Write down the importance of destructor.

SECTION-C

Short Answers

1. Rewrite the following program after removing the syntax errors if any and underline the errors:

```
#include<iostream>
$include<stdio>
class mystud
{       int studid =1001;
        char name[20];
   public
        mystud( )     { }
        void register ( )
        {cin>>stdid; gets(name);   }
void display ( )
{cout<<studid<<": "<<name<<endl;}
}
int main( )
{ mystud MS;
  register.MS( );
  MS.display( );
}
```

2. Write with example how will you dynamically initialize objects?
3. What are advantages of declaring constructors and destructor under public accessability?
4. Given the following C++ code, answer the questions (i) & (ii).

```
class TestMeOut
{
 public:
 ~TestMeOut()        //Function 1
  {cout<<"Leaving the exam hall"<<endl;}
  TestMeOut()        //Function 2
  {cout<<"Appearing for exam"<<endl;}
   void MyWork()   //Function 3
  {cout<<"Answering"<<endl;}    };
```

(i) In Object Oriented Programming, what is Function 1 referred as and when doesit get invoked / called ?

(ii) In Object Oriented Programming, what is Function 2 referred as and when doesit get invoked / called ?

SECTION - D

Explain in detail

1. Mention the differences between constructor and destructor
2. Define a class RESORT with the following description in C++ :

Private members:

Rno // Data member to store room number

Name //Data member to store user name
