

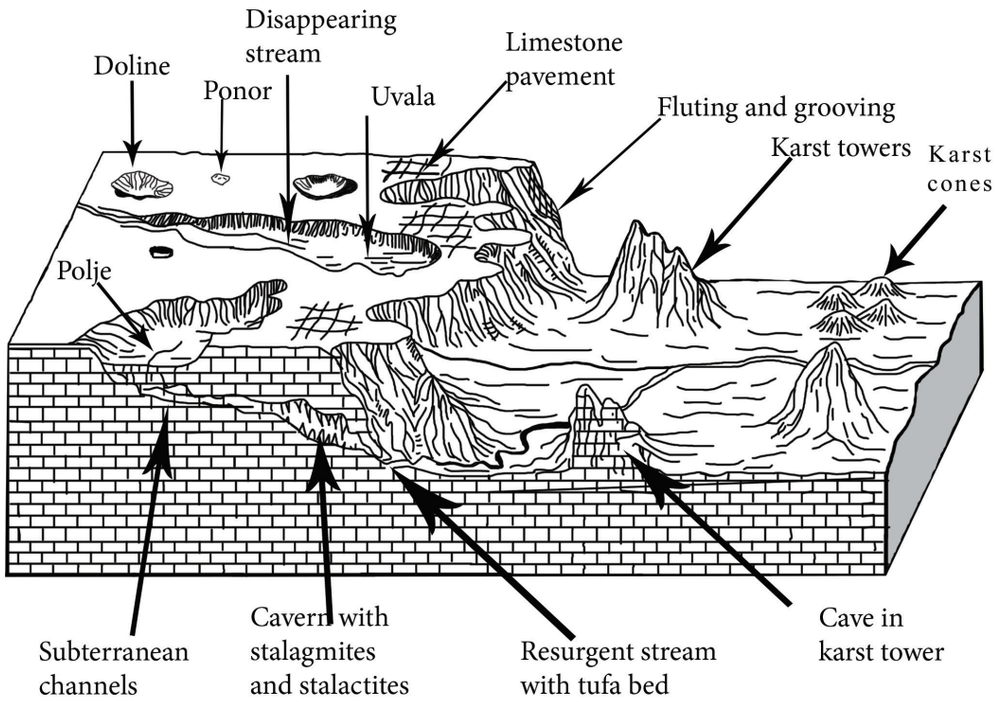

Figure 4.20 Karst features

3. Lappies

Lappies are the irregular grooves and ridges formed when most of the surfaces of limestone are removed by solution process.

4. Uvala

Series of smaller sinkholes coalesce into a compound sinkhole is called uvala.

Figure 4.21 Lappies

5. Polje

Polje is an elongated basin having a flat floor and steep walls. It is formed by the coalescence of several sinkholes. The basins often cover 250 square km and may expose "disappearing streams." Most of these basins have steep enclosing walls that range from 50 to 100 meter in height, giving rise to the name "blind valley."

6. Caves

Caves normally have an opening through which cave streams are discharged. Caves having an opening at both the ends are called tunnels.

HOTS

How was the world's biggest cave, son doonge of vietnam formed.
