

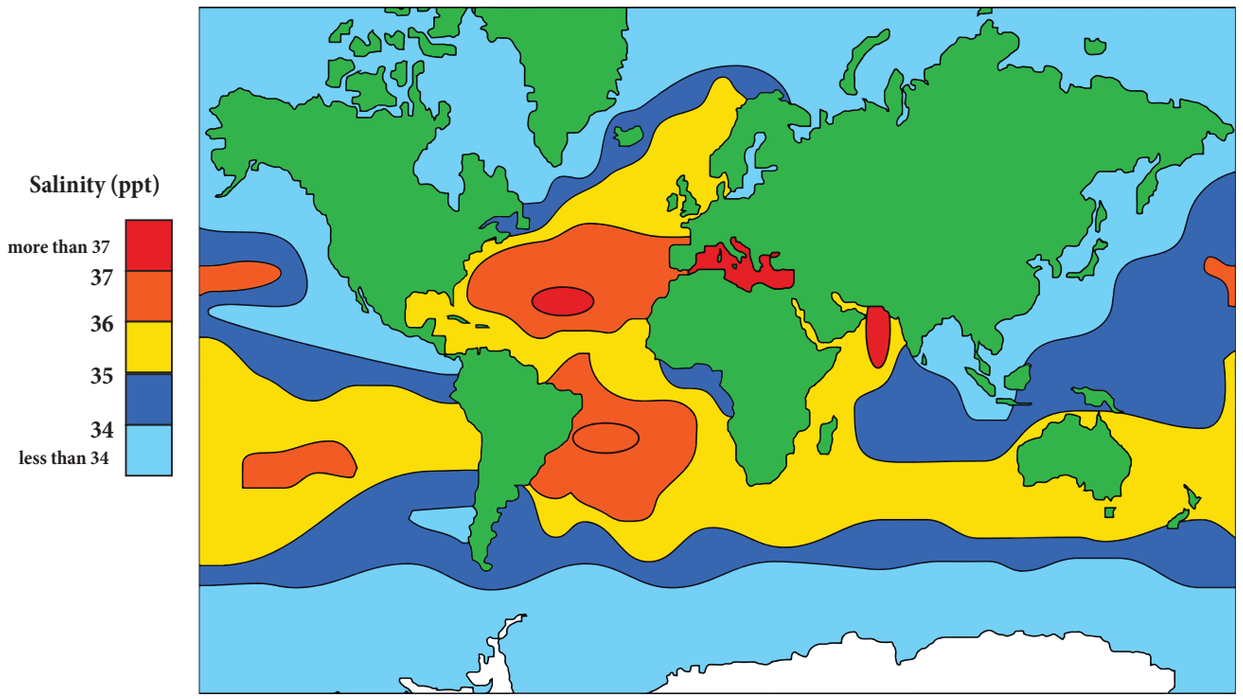

Figure 5.15 Salinity of the Oceans

Fact File

Isohaline is an imaginary line drawn to join places having equal salinity.

Salinity of **Dead Sea** is 8.6 times saltier than other oceans. The shore of Dead Sea is 423m below sea level. It has the lowest elevation on land. The sea is 377m deep. The high salt content will make people float on the sea. The high salt content has made the Dead Sea devoid of life in it.

5.11 Ocean movements

Water in the ocean is never in a state of rest. Ocean water is always in motion. It moves horizontally as well as vertically. The movement of ocean water takes place in three different ways as

1. Waves
2. Tides
3. Ocean currents.

Waves

The waves are oscillating movements in the ocean water which transfer energy from place to place. They are caused by friction of wind on the surface of water or any other disturbances' on the sea bottom.

Parts of Waves

1. **Crest**: The upper or highest part of a wave is called the crest. (Figure 5.16)
2. **Trough**: The lowest part of a wave is called the trough.
3. **Wave height**: The vertical distance between the crest and the trough is known as wave height.
4. **Wave length**: The horizontal distance between two crests or two troughs is known as wave length.
