

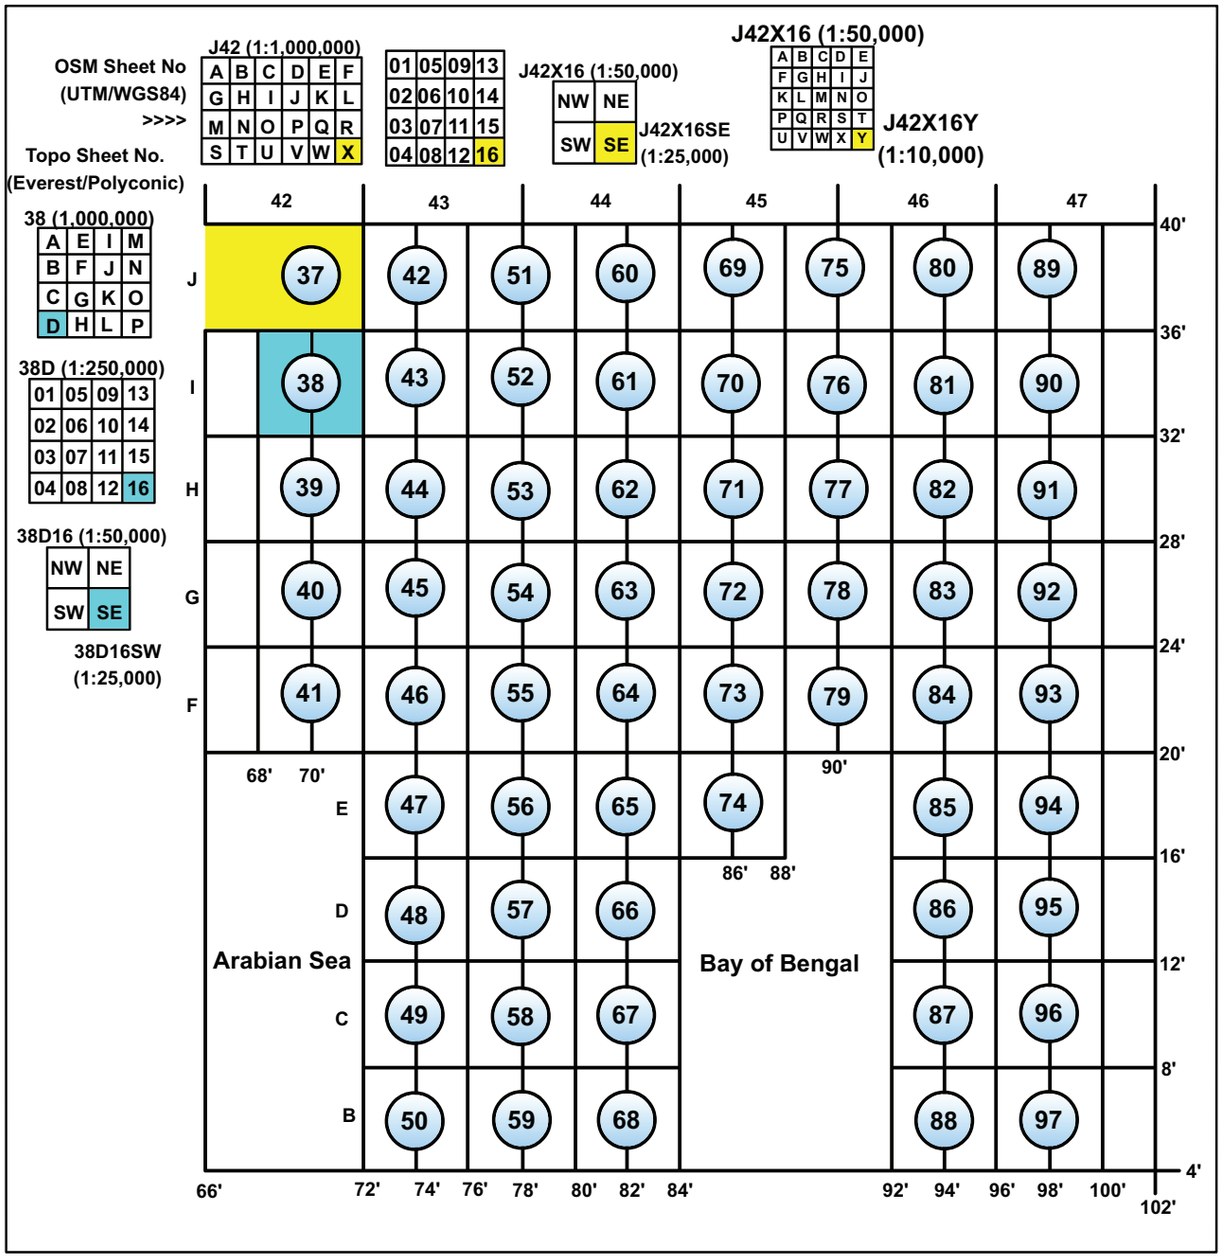

Figure 11.4 Index for conversion of Topo sheet No. to OSM sheet No.

longitudinal extent in degrees, minutes and seconds, scale, the districts, covered, contour interval etc.,

Relief

Relief refers to the general topography of the area under study. First, the landforms like mountains, hills, plateaus along with the peaks, ridges should be identified and the general direction of slope can be determined. The contour values and patterns have to be studied. Spot heights, bench marks etc help in understanding the height of certain areas.

Drainage

Drainage of an area can be understood by observing the characteristics of the rivers, their tributaries and drainage pattern.
