in water level in a tank or reservoir or well before and after monsoon.

4. Field work will improve the power of observation among the students.
5. Field trips can kindle the spirit of enquiry among the students
6. The student's skill of map reading, map drawing, field sketching and use of some geographical instruments will be improved.
7. Field work is an opportunity for the student to experience and adapt to various environments.
8. It helps to enhance the students view about the subject and to care for the environment.

Above all, it can be an enjoyable outing.

13. 3 Field work process

Field work for studying physical geography and human geography are quite different. Field work in physical geography involves direct observations, photography, field sketches, use of maps, satellite images etc. Human geographic studies require sample surveys, preparation of questionnaire, interviews and use of statistical techniques for data analysis and representation.

Any field work involves three stages. They are:

1. **Pre-field work**
2. **Actual field work and**
3. **Post field work**

1. Pre-Field Work

This involves proper planning, preparation and arrangements. It is undertaken by the teacher/school management/and local authorities. The tour details are to be informed to the CEO/DEO and field area police stations well in advance, along with the name and house address, contact details of the students and staff who undertake the field work.

Prior permission is to be obtained well in advance to enter restricted areas or reserved forests.

Arrangement should be made for sufficient food and safe drinking water. Students should be informed of the clothing requirements (Woolen caps, sweaters, shoes, mosquito repellents etc.).

Field work site mapping should be carried out by a small group of students with the assistance of their supervisor (teacher). The problem or the aim of the study and its objectives are to be explained in detail. The method of investigation and the equipments for survey in the field are to be discussed with the students.

Prepare a field map and discuss the method of conducting field work by different groups of the class. Each student may be supplied with a copy of maps for reference. They should be informed of the 'dos' and don'ts during the field work. The following are some of the items to be carried for field work in physical geography:

1. Stationery, including scripling pads, colour pencils, wax pencils, papers, pens etc.,
2. Camera with zoom and video facility.
3. Audio/video recorders to record voices of birds, local people etc.,
4. Sufficient number of binoculars to view distant objects.
5. Minor field survey equipments like measuring tape, magnetic compass, clinometers, GNSS hand set etc.,
