TN_Govt_Geography_XI_Std Unit_13.indd 282

**Steps involved in preparation of field report for field studies in physical geography**

| Sub topics | River | Hillock | Forest | Coast |
|---|---|---|---|---|
| Aim | To understand river as a natural resource. | To understand hillock as natural resource. | To understand forest as natural resource. | To understand coast as a natural resource. |
| Learning Objectives | ➢ Identify the stage of river.<br>➢ Trace the source of the river.<br>➢ Assess the command area of the river.<br>➢ Analyse river as an ecosystem. | ➢ Identify the geological history of the hillock.<br>➢ Determine the height of the hillock by simple measurement<br>➢ Draw the cross sections of it.<br>➢ Co-relate the vegetation with slope, supply of water and climate of the place. | ➢ Identify the type of forest.<br>➢ List the role of forest in the life of the people.<br>➢ Indentify fauna and flora and their trophic level. | ➢ Identify the type of coast and coastal features.<br>➢ List the role of coast in the life of the people.<br>➢ Indentify fauna and flora and their trophic level. |
| Study Area | Write about the river chosen, location of the village or town which is selected as study area. | Write about the hillock chosen, the village or town where the hill is located in the study area. | Write about the forest chosen, location of the village or town which is located in the study area. | Write about the coastal tract chosen and location of the village or town which is located in the tract. |
| Methodology | ➢ With the theoretical knowledge gained to indentify the stages of a river.<br>➢ Trace the source of the river from published sources.<br>➢ Gather information about the area served by the river in terms of supplying water for irrigation, drinking purpose, industrial purpose and recreation.<br>➢ Observe and record the fauna and flora along the river side.<br>➢ Take photo/make field sketches for all your observations. | ➢ Observe the agents of erosion responsible for the formation of the hillock.<br>➢ Using clinometer measure the height.<br>➢ Draw a sketch of the hillock.<br>➢ Collection information on cultural importance of the hillock religious / cave / paintings / resort.<br>➢ Study the varieties of biodiversity and correlate with the climate. | ➢ Gather information about the type of trees present in the forest.<br>➢ Interact with local people and collect information about the resources available in terms of timber / fuel / herb / fruits and nuts / any other.<br>➢ Construct a trophic level diagram for the forest with the information your collected. | ➢ Gather information about the area served by the coast in terms of supplying sea food, salt, power production, industrial purpose and recreation. ➢ Gather information About the type of fauna and flora along the coast and coastal water.<br>➢ Indentify the interaction of people with the resources available in terms of fuel/ food/fish weed /any other.<br>➢ Construct topic level diagram for the coastal ecosystem<br>➢ With your observation and gathered information, collect the historical facts about the coastal belt. |
| Limitation | Specify your limitations in terms of fund / time / study area selected. | Specify your limitations in terms of fund / time / study area selected. | Specify your limitations in terms of fund / time / study area selected. | Specify your limitation in terms of fund / time / study area selected. |
