- The motion of a satellite around the Earth

These two circular motions are shown in Figure 2.5

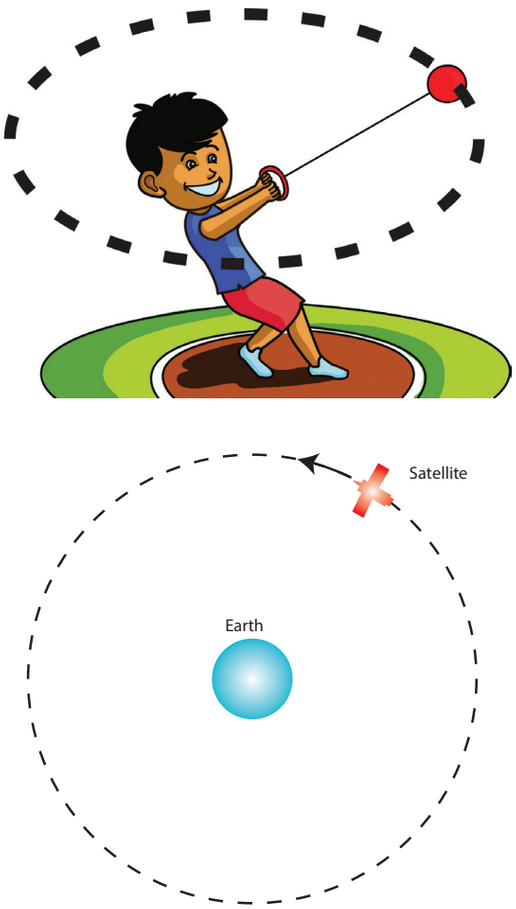

**Figure 2.5** Examples of circular motion

### c) Rotational motion

If any object moves in a rotational motion about an axis, the motion is called 'rotation'. During rotation every point in the object transverses a circular path about an axis, (except the points located on the axis).

**Examples**

- Rotation of a disc about an axis through its centre
- Spinning of the Earth about its own axis.

These two rotational motions are shown in Figure 2.6.

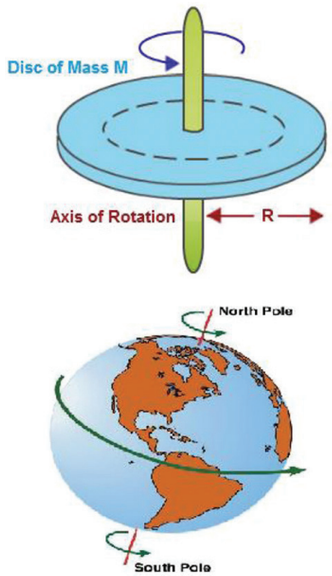

**Figure 2.6** Examples of Rotational motion

### d) Vibratory motion

If an object or particle executes a *to–and–fro* motion about a fixed point, it is said to be in vibratory motion. This is sometimes also called oscillatory motion.

**Examples**

- Vibration of a string on a guitar
- Movement of a swing

These motions are shown in Figure 2.7

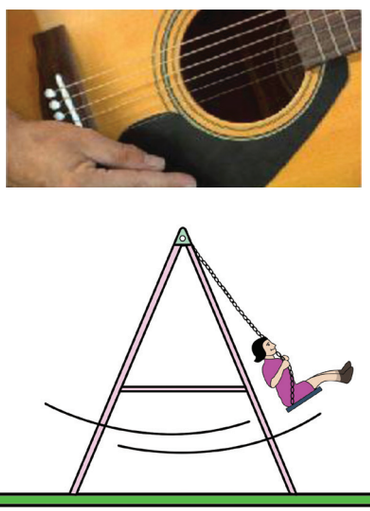

**Figure 2.7 Examples of Vibratory motion**
